

Asutosh Pattanayak

Country : India

Education: Bachelor of Science (Electronics),
Delhi University

My Expertise :

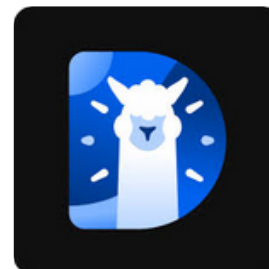

DUNE
ANALYTICS

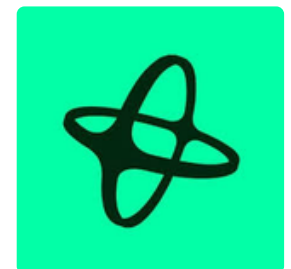

GLASSNODE

CHAINALYSIS

DEFILLAMA

NANSEN

Hard Skills:

- Crypto market analysis (spot, futures, perpetuals, funding rate behavior)
- Quantitative trading logic & strategy evaluation
- Python (Data & API workflows)
- Crypto data collection using exchange APIs (Binance, public endpoints)
- Strategy backtesting logic (rule-based & indicator-based systems)
- AI model output evaluation & structured reasoning generation
- On-chain & sentiment signal interpretation (dashboard-based)
- Market microstructure awareness (liquidity, volatility, slippage effects)
- Quantitative Trading Strategies
- Machine Learning for Crypto Signals
- Portfolio and Risk Management in Crypto Markets

Soft Skills:

- Strong communication skill in English, Hindi & Odia
- Use of Word, Excel & presentation with typing speed of (40 wbm)
- Graphic designing in tools like Canva, Figma for data visualization
- A tech geek with curiosity for new techs. in AI, crypto and blockchain.
- Knowledge of latest AI tools like Claude, Sora, midjourney and many more for crypto applications
- A fast learner
- Jupyter Notebook / Colab, TradingView
- Binance API & Crypto Exchange Interfaces, Streamlit (data dashboards)
- Memecoin and Altcoin Trading

Upwork Profile link:

Python Programming:

Self-taught Python developer with multiple production-style automation and trading tools focused on crypto market data, signal generation, and API-driven workflows.

Such as Meme_Trading telegram_bot for arbitrage signals. Youtube_comment_bot for sentiment analysis in crypto communities. I have a solid knowledge of various python libraries like pandas, NumPy, ccxt, web3.py, and scikit-learn, can automate any required task for crypto data processing and efficiency.

Crypto Price Monitoring Dashboard:

I created a dashboard service in Python that integrates with a Google Sheet containing tickers and entry prices, fetches live prices via the Binance API at 2-minute intervals, and sends Telegram notifications when prices approach within 5% of the entry price. This tool supports portfolio monitoring, risk management, and timely alerts for traders in volatile crypto environments.

Forex Trading Signals Bot:

I developed a 24/7 forex trading signals bot using Python, incorporating custom trend-holding indicators and strategies for identifying optimal entry and exit points. The bot delivers real-time signals and is deployed in a live Telegram community with active users, demonstrating its reliability in high-volatility 24/7 markets.

Wordpress website Devp:

For one of my crypto SAAS project, I made a website on wordpress using Hostinger, elementor and some wordpress tools to track on-chain metrics.(Built and deployed a crypto SaaS analytics website (WordPress + hosting stack))

WEBSITE URL: <https://upcmts.com/>

Memecoin and Altcoin Trading:

I have hands-on experience trading memecoins and altcoins, researched and traded high-volatility altcoin cycles. I specialize in timing illiquid pump phases, leveraging on-chain data analytics for flow detection, and incorporating market sentiment analysis from social signals and community trends to inform entry and exit strategies.
